Visit report of poultry feed and equipment companies in France, Belgium and The Netherlands:

In line with the scopes of Pezhvac Company on technology transferring, and to make state and private managers familiar with the most updated technological outcomes, we arranged visits to pioneer companies of poultry and related feed and equipment production in France, Belgium and The Netherlands. Started from February 11 in France and terminated in February 18 in The Netherlands. 29 state and private managers had technical visits to feed production sites, equipment manufacturing lines as well as hatchery and participated in presentations in Vencomatic group, Inve Belgie, Institute of poultry in Belgium, Blgabroad Hatchery, Nukamel Production B.V and, Jansen Poultry Equipment companies. The cities hosting the visits were Paris in France, Brussels, Geel and Merksplas in Belgium as well as Weert, Eersel, Barneveld and Amsterdam in The Netherlands.

Vencomaticgroup

Company Name

Vencomaticgroup

Company Location

Eersel, The Netherlands

Visit Venue

Venco Campus

Area of Specialization

The Vencomatic Group is owned by Cor and Han van de Ven from Eersel, the Netherlands. It started over 30 years ago, in 1983, with Cor's breakthrough innovation for breeder housing: the first automatic breeder nest. In 2004 Vencomatic started combining the last phase of incubation and hatching of broilers on the farm. In 2006 Vencomatic introduced the Patio system in which on-farm hatching is integrated as a standard. With the X-Treck concept on-farm hatching will also be possible in floor houses. Setter trays with 18 day-incubated eggs are placed on a rail system. This rail system is suspended and positioned freely in the air, ensuring an optimal airflow surrounding the eggs during hatching

(INVE België)

Company Name	(INVE België)
Company Location	(Dendermonde)
Visit venue	Inve production line
Area of Specialization	<p>INVE BELGIË NV is a Belgian company active in the animal feed sector. The company specialises in the development, the manufacturing and the sales of concentrates, premixes, additives and nutritional ingredients. FAST (For Active Stimulation of Tractus) is an early feeding concept for one-day-old chicks developed by INVE België NV focusing on two major goals: enhancing feed intake shortly after chicks are hatched or arrive in the poultry house and stimulating the development of the intestinal tract. Highly digestible proteins, different types of carbohydrates and fibers, additives supporting the bird's immunity and ability to digest the alimentary fat are brought together in a unique mixture of a cold-pressed granulate and a meal fraction.</p>

(Provincieantwerpen)

Company Name	(provincieantwerpen)
Company Location	(Antwerpen)
Visit Venue	Poultry institute
Area of Specialization	<p>Our test houses to meet the increasingly stringent requirements for laying hens and broilers. We've built to conduct research tailored to the farmer in the field. Our stables are admittedly smaller but for research purposes, the test groups are large enough to be of statistical value. Our hens stall has a total capacity of 31,000 laying hens. They are divided into three different housing systems: two aviaries and one with enriched cages. Each system has four test sections, which allow to play with settings for feed, water and climate, and to compare them. Our three broiler houses have a combined capacity of about 44 000 chickens. Two existing houses each have 12 000 animals spread over two environment departments.</p>

Belgabroed

Company Name	Belgabroed
Company Location	Merksplas
Visit Venue	Belgabroed Hatchery
Area of Specialization	<p>The business are true family companies that, through collaboration, have achieved a pioneering role within the poultry market in north-west Europe. Since we all work in the same sector, we constantly push each other's performance to a higher level. The group stands for more than 80 years of experience, the right combination of young and experienced, motivated workers. Belgabroed is a company with the capacity of 1.4 million broilers a week and employing 45 people, Belgabroed is the largest hatchery of day-old chick in Belgium. The hatching eggs are sourced from certified production companies. Using a self-developed IT system, all eggs are traced until the rearing process.</p>

Nukamel

Company Name	Nukamel
Company location	Weert
Visit venue	Conference center of Antje van de Statie And Nukamel production line
Area of Specialization	<p>The world's poultry demand has continuously risen in the last decades. Chicken meat output accounts for some 88 per cent of the world's poultry meat production. Improved genetics, more attention to health and good management, and, an advanced way of feed formulation, have lead to extreme growth rates. Approximately 85% of the total production cost of broilers is attributed to the cost of feeding; So, feed efficiency and health are extremely important for the economical viability of broiler farms. In that respect, Nukamel also offers specific products for poultry, supporting digestibility and growth. As is the case for young calves or piglets, young birds have specific needs. Ensuring an optimal start for the young broiler or the young turkey is a prerequisite to make full use of its genetic potential.</p>

Jonsen poultry equipment

Company Name	Jonsen Poultry Equipment
Company location	Barneveld
Visit venue	Jonsen Poultry Equipment Company and manufacturing line
Area of Specialization	<p>Jansen Poultry Equipment was founded in 1986 by Mr A. H. Jansen for development and production of the first automatic laying nests. With his knowledge of technology and poultry, Mr Jansen succeeded in developing the most sought-after laying nest. Today the company offers a wide range of poultry systems and has grown to become a flourishing international company with its headquarters located in the Netherlands. The BroMaxx broiler colony system ensures perfect environment, hygiene and animal health and therefore maximum growth and a uniform broiler flock with premium meat quality. The system is designed for high bird density and smart harvesting methods result in significant labour savings.</p>
